

NEWMAN

AUTOMOTIVE INDUSTRY

Delivering first-class services to companies in the automotive industry and others. We believe that **QUALITY leads!**

NEWMAN Automotive Industry, s.r.o.
Mařákova 263/3,
160 00 Praha 6

In need of **control & rework** or an **emergency production fix**? Within 24 hours, we provide you with experienced staff, offer our know-how or even make our premises available to you.

We deliver services such as **control & rework**, **production outsourcing**, emergency **production fix** or **interim management**.

Outsourcing production will help when **you lack workers or premises** for production, assembly or product packaging – our team will overtake the activity entirely.

Our services are legally compliant, easy to understand, and we hold **ISO 9001 certification of quality management**.

Our processes are **automated** according to ISO 9001 and IS GURU.

Our **liability insurance** for damage caused is 25 000 000 CZK / 1 000 000 EUR.

NEWMAN
PERSONNEL AGENCY

We cooperate with our sister agencies **NEWMAN Personnel Agency** in Czechia and **NEWMAN Personnel Agency Slovakia** in Slovakia – thanks to which we quickly secure workers for bigger projects.

We work for companies from various industries

- Our services use companies from **automotive, beauty, electrical, food** and other industries, mainly in Czechia and Slovakia, but also in western Europe.
- Our workers mostly come from **Czechia and Slovakia**. Based on the type of contract, they are also from Poland, Hungary or Ukraine.
- When working on big projects, we make use of our **strong relationship with our sister personnel agencies** in Czechia and Slovakia and are thus able to secure workers quickly.

Our services: what we help companies with

1. Control & rework
2. Production outsourcing (e.g., packaging, repacking or product assembly)
3. Emergency production fix
4. Interim management

1 Control & rework

- ✔ **Our experienced team** arrives within **24 hours** and starts reworking the parts immediately.
- ✔ Our team has **experience with controlling large series of products** such as seats, plastic and mechanical parts, as well as electronic ones. Control & rework is usually carried out at your premises, but we can arrange it at ours in Czechia or Slovakia.
- ✔ We control anything from functional tests of mechanical parts for machinery and equipment to electronic or visual components for cars.

2 Production outsourcing

- ✔ **Want to focus on the core business and secondary processes** such as packing, repacking or product assembly **instead outsource?**
- ✔ Shift the activities requiring manual work to us, even within a day. Outsource it entirely if you have no premises, workers or know-how.

Example: A food manufacturer usually produces single flavour packaging for stores. However, a foreign supermarket requires different packets with a specific mix of flavours.

Solution: The manufacturer outsourced our team for all specific orders. Within days, we have prepared pallets and trucks according to the requirements.

2 Production outsourcing

Example: A beauty manufacturer from abroad has expanded its product range by offering gift packages.

Solution: They brought individual components to our premises. We assembled and packed gift packages as required and shipped them on time.

Example: A manufacturer of simple electronics outsources most components. Development, core business and marketing are done on their own.

Solution: The manufacturer sends us all electronic and mechanical parts, and our team assembles them, packs and ships them.

3 Emergency production fix

✓ **Machines stop working unexpectedly, more workers fall ill simultaneously and you can't keep up?** Our experienced team will arrive within 24 hours. Alternatively, we can carry out the work on our premises close to Prague or in Slovakia.

✓ Assembling mechanical or electrical components for the cars and a make-up kits is not a problem. Our **coordinators will set up efficient processes** to fulfil your requirements quickly.

Example:

A company that manufactures products for the construction industry had parts of their new automatic assembly line crash.

Solution: Some of our team members stepped in within a couple of hours to ensure that production was not interrupted. Within 48 hours, 20 of our workers, led by our supervisors, replaced the automatic assembly line with their manual work.

3 Emergency production fix

Example: A company focused on automation replaced their assembly line in a large factory, but the new line was not working – technicians were not able to repair it quickly, and the company was in danger of heavy fines for missing deadlines.

Solution: We quickly set up the processes and took over the production for 2 months – our workers did the work manually. The company's IT department gained time to get the automated line running and thus avoided heavy fines.

4 Interim management

Do you need a qualified employee just for a couple of months? We will secure an experienced production, HR or quality manager who will quickly catch up, bring their know-how and move the company forward.

1. Example: The company was asked by its headquarters abroad to expand the production – and quickly find a manager with plenty of experience to set and debug processes.

Solution: They approached us and we picked one of our suitable managers – he took up the vacancy within 14 days.

2. Example: An HR manager left the company, and management needed to find a replacement to lead the junior HR team.

Solution: Within a week, our experienced manager stepped in and helped the company through a challenging period. He trained a skilled junior in HR who took over the management position over time.

So, what can we help you with?

Get in touch and we'll get moving.
